

Lifespring Clinic – Pharmacy & Medication Policy

1. Pharmacy & Medication Services

Lifespring Clinic supports safe and organized medication use as part of patient care. Prescriptions may be provided digitally or in print and include medication, dosage, and duration instructions.

- Patients may submit prescriptions at the clinic pharmacy or use an external pharmacy.
 - Medication plans are reviewed as part of treatment and follow-up care.
 - Patients should maintain an updated list of all medicines, supplements, and known allergies.
-

2. Medication Use Guidelines

- Take medicines exactly as prescribed by the healthcare provider.
 - Do not skip doses, double a dose, or change the prescribed schedule without professional guidance.
 - Use alarms, mobile reminders, or pill organizers when needed to support adherence.
 - Store medications according to the instructions on the package or prescription.
 - Keep medicines out of reach of children and avoid sharing prescription medicines with others.
-

3. Prescription Handling

1. Prescription Review – Check the medicine name, dosage, frequency, and duration before leaving the clinic.
 2. Pharmacy Submission – Submit the prescription to the clinic pharmacy or an external pharmacy.
 3. Clarification – Contact the clinic if any instruction is unclear or if a medication appears different from what was discussed.
 4. Adherence Tracking – Keep a record of medication intake and report missed doses or difficulties.
-

4. Side Effects & Medication Concerns

- Report unexpected or concerning side effects to the healthcare provider promptly.
 - Do not stop a prescribed medication without consulting the doctor, unless emergency guidance specifically instructs otherwise.
 - Seek immediate emergency care for severe reactions such as significant breathing difficulty, loss of consciousness, or rapidly developing swelling.
 - Tell the healthcare provider about allergies, existing medicines, and supplements before starting a new medication.
-

5. Additional Notes

- Medication management is part of the patient's personalized care plan.
- Follow-up visits may be used to review treatment response and make appropriate adjustments.

- Patients are encouraged to ask questions about medication purpose, dosage, duration, and precautions.
